This report is the international p Authority under Article 35 and	transmitted to the applicant acc	orang war and	is International Preliminary Examining 36.						
2. This REPORT consists of a total		cluding this cove	r sheet.						
3. This report is also accompanied by ANNEXES, comprising:									
		eau) a total of	2 sheets, as follows:						
a. (sent to the applicant and to the International Bureau) a which have been smended and are the basis of this report									
and/or she	ets containing rectifications auti	orized by this A	uthority (see Rule 70.16 and Section 607 of the						
Administra	ative Instructions).	11.1 alda Andha	and considers contain an amendment that goes						
beyond the	e disclosure in the international	application as file	ed, as indicated in item 4 of Box No. I and the						
Supplemental Box.									
b. (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s))									
b. (sent to the International But tall only), containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the									
readable form on Administrative In	structions).								
4. This report contains indication	as relating to the following items	3:							
Box No. I Bas	is of the report								
Box No. II Pric	ority								
Box No. III Nor	n-establishment of opinion with	regard to novelty	, inventive step and industrial applicability						
Box No. IV Las	Box No. IV Lack of unity of invention								
I 빌 - ''' ' '''	Becaused statement under Article 35(2) with regard to novelty, inventive step or industrial								
app.	applicability; citations and explanations supporting such statement

Form PCT/IPEA/409 (cover sheet) (January 2004)

INTERNATIONAL PRELIBINARY REPORT ON PATENTABILITY

	N- *	Basis of the report
1501	No. I	
1.	With a	regard to the kinguage, this report is based on the international application in the language in which it was filed, unless vise indicated under this item.
	\boxtimes	This report is based on a translation from the original language into the following language english, which is the language of a translation furnished for the purposes of:
		international search (under Rules 12.3 and 23.1(b))
		publication of the international application (under Rule 12.4)
		international preliminary examination (under Rules 55.2 and/or 55.3)
2.	furnis	regard to the elements of the international application, this report is based on (replacement sheets which have been the detection of the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" are not annexed to this report):
l		the international application as originally filed/furnished
	$\overline{\boxtimes}$	the description:
	السيك	pages 1-11 as originally filed/furnished
		received by this Authority on
		pages* received by this Authority on
	\boxtimes	the claims: as originally filed/furnished
1		pagesas originally intervitination as amended (together with any statement) under Article 19
		pages*
		pages 1-2 received by this Authority on 2004-09-02 received by this Authority on
		pages* received by this Authority on
	\boxtimes	the drawings: as originally filed/furnished
		pages 1-2 received by this Authority on
		pages* received by this Authority on
		a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing.
3.		The amendments have resulted in the cancellation of:
		the description, pages
		the claims, Nos.
1		the drawings, sheets/figs
		the sequence listing (specify):
		any table(s) related to the sequence listing (specify):
4.		This report has been established as if (some of) the amendments annexed to this report and listed below had not be made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Ru 70.2(c)).
1		the description, pages
1		the claims, Nos.
1		the drawings, sheets/figs
		the sequence listing (specify):
		any table(s) related to the sequence listing (specify):
.	. If its	em 4 applies, some or all of those sheets may be marked "superseded."

2. Citations and explanations (Rule 70.7)

Documents cited in the International Search Report

D1: US 5 241 250 A
D2: US 4 578 764 A
D3: US 5 274 781 A
D4: EP 0 338 117 A2
D5: EP 0 728 559 A2

D1 discloses a servomotor control system for multiaxes used for robots. The system comprises a servo-controller (18), a positioning controller (16) and a teaching box (14). This indicates that there must be one or more computer and drive unit in the system for controlling the robots. The system comprises several modules (14, 16, 18) where each module corresponds to independently control a servomotor simultaneously. The modules are arranged for connection to one another through a bus (17). A module can easily be added to expand the system (see column 4, lines 18-62; figure 1; abstract).

D2 discloses a control system for control of one or more manipulators. The system employs a computer (12) and one or more modules (20) for controlling the manipulator. The separate modules (12, 20) are adapted to handle different functions and are in communication with at least one of the other modules through a computer bus (14). The system can easily be expanded by additional of one or more modules (see column 1, lines 33-61; column 2 line 4 - column 3 line 4; figures 1-2; abstract).

D3 discloses a control system for controlling a machine. The

Supplemental Box

In case the space in any of the preceding boxes is not sufficient. Continuation of: Box $\,V\,$

system comprises a computer (21) and one or more units (12, 13) with its own power supply (14, 15, 18) for controlling the machine. The units are adapted with one or more separate modules (14, 15, 16, 17) for performing different functions. Each unit provides separately power to the modules and communicates with at least one of the other unit through a data bus (13) and a cable (22) (see column 1, lines 11-21, column 2, lines 53-68; figures 1-2; abstract).

D4 discloses a pair of synchronised computer-controlled robotic machining centres capable of automatically working and operating in mirror relationship on opposite side of components to be assembled (see column 7, lines 8/51; figure 2; abstract).

D5 discloses a power supply system for industrial robot with drive mechanisms for moving manipulator in several degrees of freedom. Each drive mechanism has an electric driving motor (2) which is supplied and controlled via a rectifier (6) and a drive device (7) (see figure 3; abstract).

The invention according to claims 1-11 differs from what is known in D1 - D5 by a control system comprising a plurality of separate main computer modules adapted to handle various functions. Each module is autonomous and has its own well-defined interface with respect to the other modules, which may either be placed together or be geographically separated at suitable locations. An axis computer provides control signals to the drive units for controlling the manipulator, and a main computer is adapted to execute a program with instructions for the movements and that supplies the axis computer with control instructions. The separate modules, where each one of the modules is surrounded by its own casing, has its own power supply, computer, drive unit, and is adapted to communicate with at least one of the other modules.

The difference in this control system makes it possible to provide a flexible control system for control of one or more manipulators. It becomes easier to connect a new manipulator to the control system, to add a new function and to replace some part for upgrading the control system. It is easy for the control system to be divided into a plurality of separate modules with their own power supply, computer and drive unit

adapted to handle various functions. If some errors would occur in the control system, the faulty module can simply be replaced. The teaching of the prior art as disclosed in the cited documents does not lead a skilled person to the invention. Therefore, the invention defined in the claims is not obvious to a person skilled in the art.

The invention according to claims 1-11 is thus novel and is considered to involve an inventive step. The invention also has industrial applicability.

CLAIMS

25

30

DT05 Rec'd PCT/PT0 0 7 DEC 2004

- 1. A control system for controlling one or more manipulators (2), wherein the control system comprises one or more drives that control motors driving the movements of the manipulator, an axis computer (6) that provides control signals to the drives, and a main computer (4) that is adapted to execute a program with instructions for the movements and that supplies the axis computer with control instructions, characterized in that the control system 10 comprises a plurality of physically separated modules (12, 14, 16, 18, 20) adapted such that they can be placed at separated locations and to handle different functions, each of the modules is surrounded by a casing (15) of its own, has its own power supply (26) and has a well-defined 15 interface in relation to the other modules, wherein said computers (4, 6) and drives are arranged in the modules (9), and one of said modules is a main computer module (12), which comprises the main computer (4), and another of said modules is a drive module (14), which comprises the 20 axis computer (6).
 - 2. A control system according to claim 1, **characterized** in that the control system comprises at least two separate drive modules.
 - 3. A control system according to claim 2, characterized in that each drive module (14) is adapted to control a manipulator (2).
 - 4. A control system according to any of claims 1-3, characterized in that said drive module (14) comprises a drive unit (8) that includes one or more drives.
 - 35 5. A control system according to any of claims 1-4, characterized in that one of said modules is a transformer module (18) that includes a transformer.

- 6. A control system according to any of the preceding claims, characterized in that one of said modules is a control module (16) that comprises the control panel of the control system.
- 7. A control system according to any of the preceding claims, characterized in that at least some of the modules are adapted to communicate via Ethernet.
- 8. A control system according to any of the preceding 10 claims, characterized in that said manipulator is an industrial robot (2).
- 9. A control system according to any of the preceding claims, characterized in that the control system comprises 15 at least three modules.
 - 10. Use of a control system according to any of claims 1-9 for controlling an industrial robot.
- 11. A method for controlling one or more manipulators (2), wherein the control system comprises drives that control motors driving the movements of the manipulator, an axis computer (6) that provides control signals to the drives, and a main computer (4) that is adapted to execute a pro-25 gram with instructions for the movements and that supplies the axis computer with control instructions, characterized

in that said one or more computers and drives are arranged

in physically separated modules (12, 14, 16, 18, 20), each of which has its own power supply (26) and a well-defined 30 interface in relation to the other modules, wherein the axis computer and the main computer are arranged in separate modules and are brought to communicate with at least one of the other modules.
